In the case of the rendering, users are able to obtain a good estimation of the cost of the project. It is also possible to create the project, extract the output for the 3D printing, as well as save the whole design of the product. One of the advantages of the application of this software is the possibility to apply several materials for the design of the product and make this part more durable and have the best quality. Another advantage of this software is the ease of designing it because there is no need to be a specialist, he is also sufficient to use the software. A sandstone column

[Clinical application of cytomegalovirus-induced apoptosis in active Behçet's disease]. A few studies have recently indicated that cytomegalovirus (CMV) infection may be a trigger factor in pathogenesis of Behçet's disease (BD). The aim of this study was to assess whether patients with active BD have any evidence of CMV infection and whether CMV infection plays a role in the development of BD. CMV-specific IgM and IgG were determined by using enzyme immunoassay (EIA) and the level of viral protein pp65 was determined by immunohistochemical staining. Thirty seven patients with BD were investigated for CMV infection by immunohistochemistry, and 7 patients were positive (CMV+). The level of pp65 protein was significantly higher in BD patients with CMV infection (21.9 +/- 14.6) than in those without (7.5 +/- 3.2, p = 0.04). The mean duration of BD was significantly longer in patients with CMV infection (54.9 +/- 16.8 months) than in those without (20.0 +/- 6.0 months, p = 0.02). We concluded that patients with active BD may have evidence of CMV infection and a positive rate of this infection might be closely related to the severity of disease.

Q: How to get several unique ids from two different collections I have three collections and would like to retrieve all the values from two of these collections that have the same value in the third. This is my code: var allSortedItems = \_items.OrderBy(x => x.id).ToList(); var allIds = \_items.Select(x => x.id).Distinct().ToList(); var allUn 82157476af
